A word from the CEO

RPMTECH CO., LTD. was established in 2002 and we have been developing and manufacturing Electro-Hydraulic Valve Actuators for nearly 20 years. Our products are equipped with remote / local control methods, advanced control modes, and optional fail-safe mechanisms that allow for maximum efficiency and reliability. Our actuators are powerful, compact and versatile. RPMTECH has pioneered the Electro-Hydraulic Actuator market and is constantly striving to do so with our patented and certified technology.

RPMTECH Actuators have many applications in the water, marine/shipbuilding, power/energy, and chemical/petro-chemical industries and beyond. All of our products are custom built to best fit the needs of our clients. We will constantly strive to make reliable and innovative products and provide you with the best customer service possible. Thank you!

DHP Electro-Hydraulic Power Cylinder	38
---	----

RPMTECH™ Electro-Hydraulic Actuators

Electro-Hydraulic Actuators are driven by the **hydraulic pressure** generated from an **electric motor**, which is then delivered to the **hydraulic cylinder** to control the **valve**.

Compact and All-in-One

RPMTECH™ actuators are equipped with hydraulic pressure generators, a high tech controller, and a manual hand pump built on patented technology. The compact, all-in-one design and the modular installation capabilities makes the actuators versatile and easy to conduct maintenance.

Advanced Software

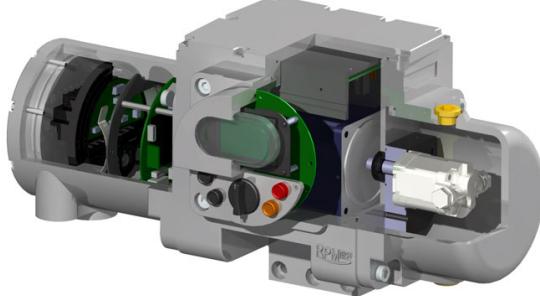

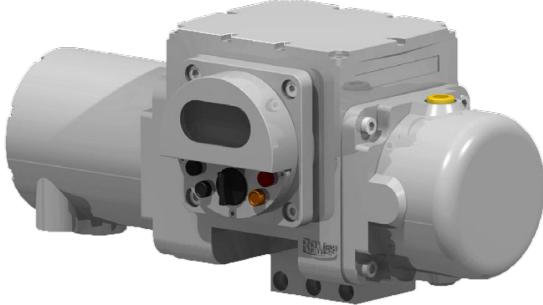

RPMTECH™ actuators support a variety of communication platforms to best fit the needs of the end user. The user can access virtually all settings and advanced control modes via the LCD display. The self-diagnosis feature allows for simple maintenance and maximum efficiency.

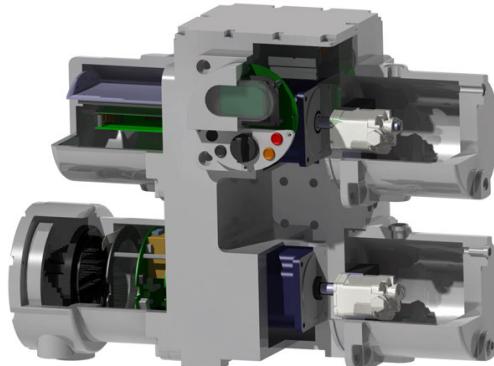

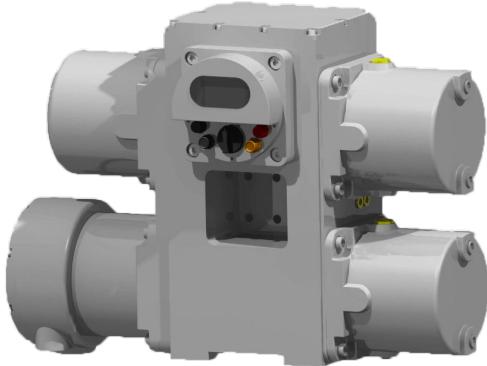

Safe and Reliable

RPMTECH™ actuators are engineered (both software and hardware) to maximize the safety of the user and enhance the reliability of the product. The manual hand pump is engineered based on patented technology and adds more reliability especially during a power loss or emergency. Also, Modular Installation allows for the actuator to be installed at a safe and accessible location.

MHP (Micro Hydraulic Power-pack)

DHP (Dual Hydraulic Power-pack)

Hydraulic Power-pack: MHP vs DHP

Electro-Hydraulic Actuators built by RPMTECH™ are equipped with either the **MHP** (Micro Hydraulic Power-pack) or the **DHP** (Dual Hydraulic Power-pack). The key difference is that the DHP has two motors, which allows the **operation speed to double** and adds a **redundancy feature** where the actuator is operated by a single motor when the other motor malfunctions.

All RPMTECH™ Electro-Hydraulic Actuators include:

- High-efficiency bi-directional brushless DC motor(s)
- Buttons/switches for local control (magnetically operated, isolated from the electrical circuitry)
- Built-in Graphic LCD display
- Built-in oil tank with optional biodegradable hydraulic oil (non-toxic)
- Patented Manual Hand Pump

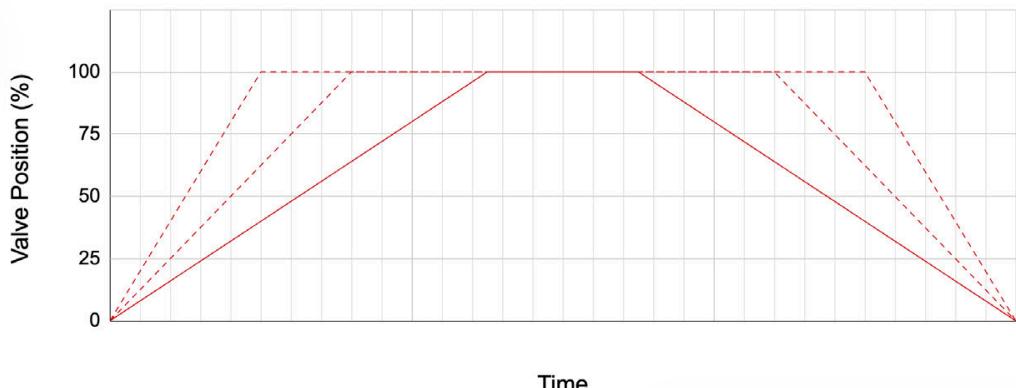

Advanced Control Modes

Advanced Control Modes optimized for **precise flow control, water-hammer absorption, and valve disk protection**

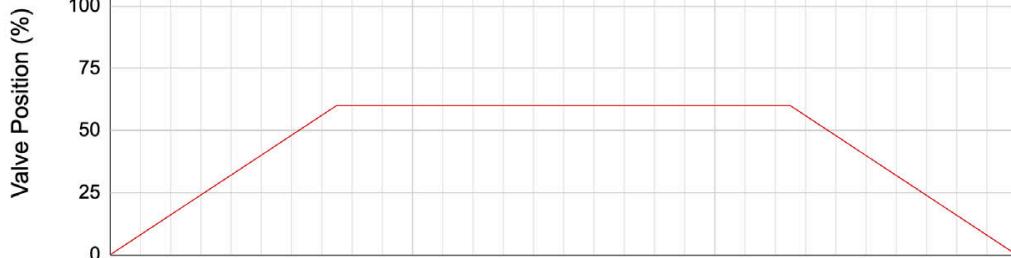

Open/Close

Open and Close at constant speed where the speed is configurable.

(applicable to all models)

Modulation

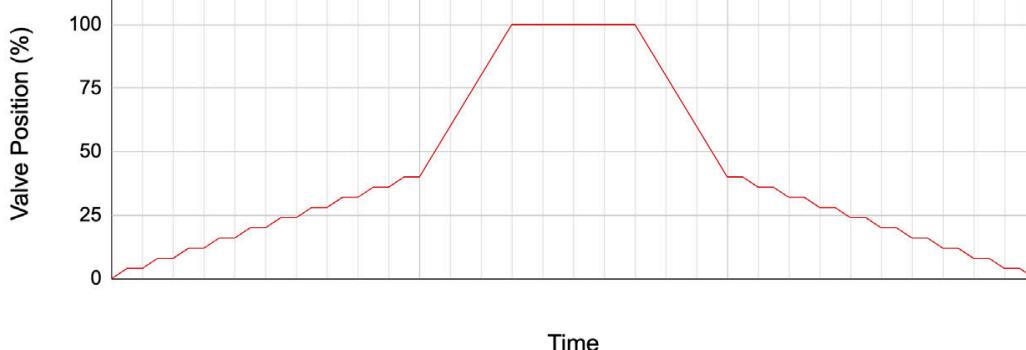

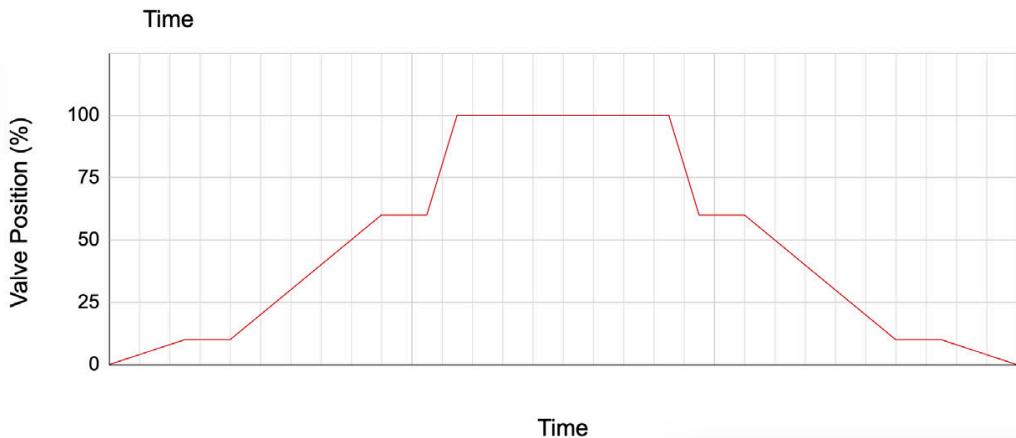

Maintains valve at a certain position (configurable every 1%).

(Optional)

Speed Control

The Open/Close operation is divided into 3 sections where the speed and stop time at each section is configurable.

(Optional)

Step Control

The actuator operates very slowly at a constant interval to overcome the minimum operating speed of the motor. This feature helps absorb shock from water hammering and improves fluid stability.

(Optional)

EMC

The actuator is connected to an Uninterruptible Power Supply (UPS), which is essentially a backup battery for emergencies. (Optional)

Types of Installation

1 Vertical Installation

Applicable Valves

Butterfly Valves, Ball Valves, Plug Valves, Gate Valves, Globe Valves, etc.

Features

- Valve Stem is **vertical**
- Actuator is **directly attached** to the valve
- Gearbox **not required**
- Direction of the Actuator is **adjustable every 90°**

2 Horizontal Installation

Applicable Valves

Butterfly Valves, Ball Valves, Plug Valves, Gate Valves, etc.

Features

- Valve Stem is **horizontal**
- Actuator can be **directly attached** to the valve or attached via **link connection**
- Gearbox **not required**
- Direction of the Actuator is **adjustable every 90°**

3 Extended Vertical Installation

Applicable Valves

Butterfly Valves, Ball Valves, Plug Valves, Gate Valves, Globe Valves, etc.

Features

- Actuator is **directly attached** to the valve via an **extended valve stem**
- Valve Stem is **vertical**, commonly applied to **submerged valves**
- Gearbox **not required**
- Allows for **safe** and **accessible** (remote) operation of the valve

4 Modular Installation

Applicable Valves

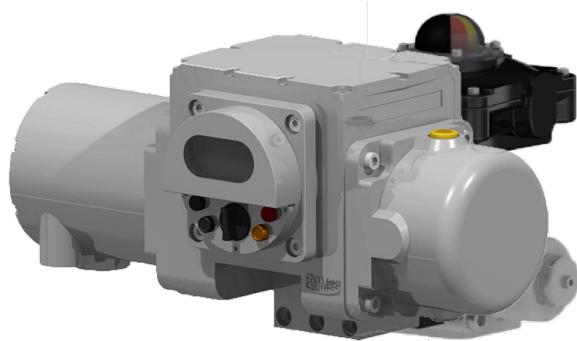

Butterfly Valves, Ball Valves, Plug Valves, Gate Valves, Globe Valves, etc.

Features

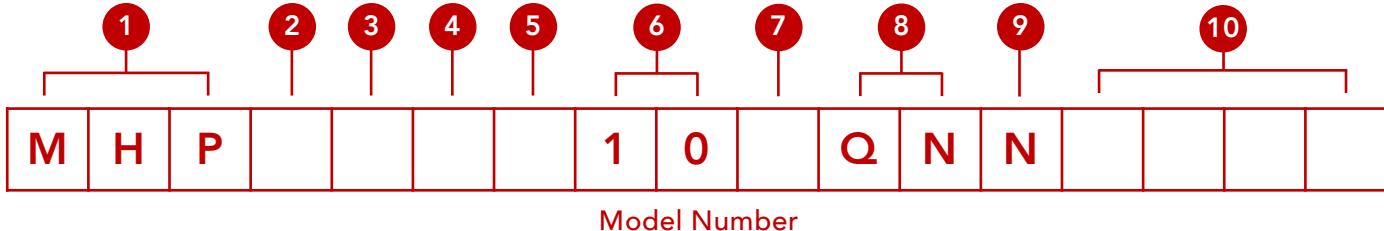

- Actuator and Cylinder is **installed separately**
- Valve Stem and Actuator can be installed in **any direction**
- Gearbox **not required**
- Allows for **safe** and **accessible** (remote) operation of the valve

MHP Electro-Hydraulic Quarter-Turn Valve Actuator

Mechanical	Torque	600 Nm ~ 32,000 Nm ¹
	Hydraulic Oil	ISO VG46 (Optional: SYNTH ISO VG46)
Electrical	Motor	0.6 kW Brushless DC Motor
	Power Input	Single Phase AC 110 ~ 220 V ($\pm 10\%$) 50/60 Hz Three Phase AC 380 ~ 460 V ($\pm 10\%$) 50/60 Hz
